

# Isles of Life

by Happy Little Tree

# User Need

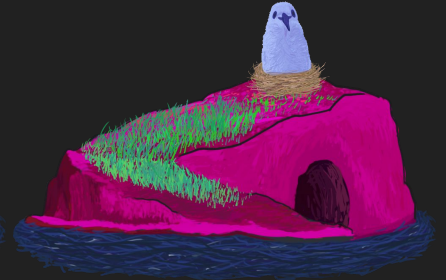

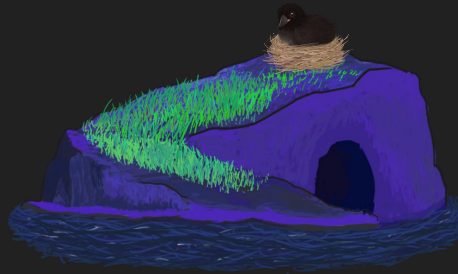

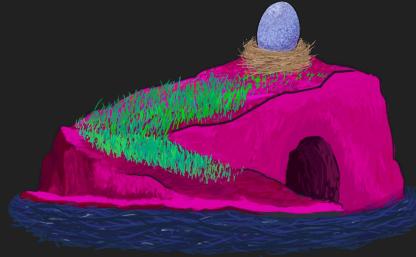

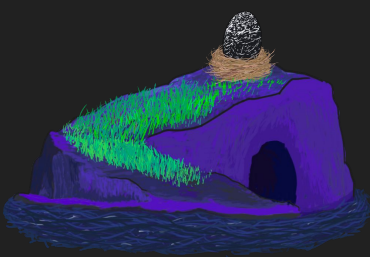

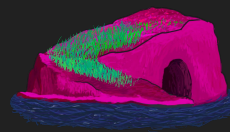

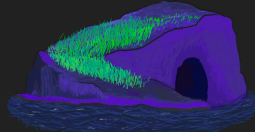

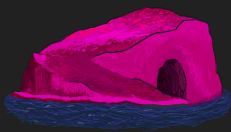

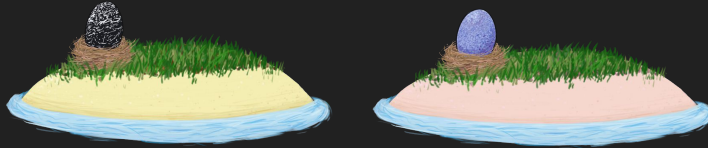

- Keeping track of all your responsibilities and completing them in a timely manner is difficult, we want to help make that a little bit easier
- Set their own goals according to individual needs.
- Track the progress of their goals.
- Gain motivation from our app to finish said goals and maintain progress to enable productivity.
- Make task management less stressful with a pleasant island setting

Sketches:

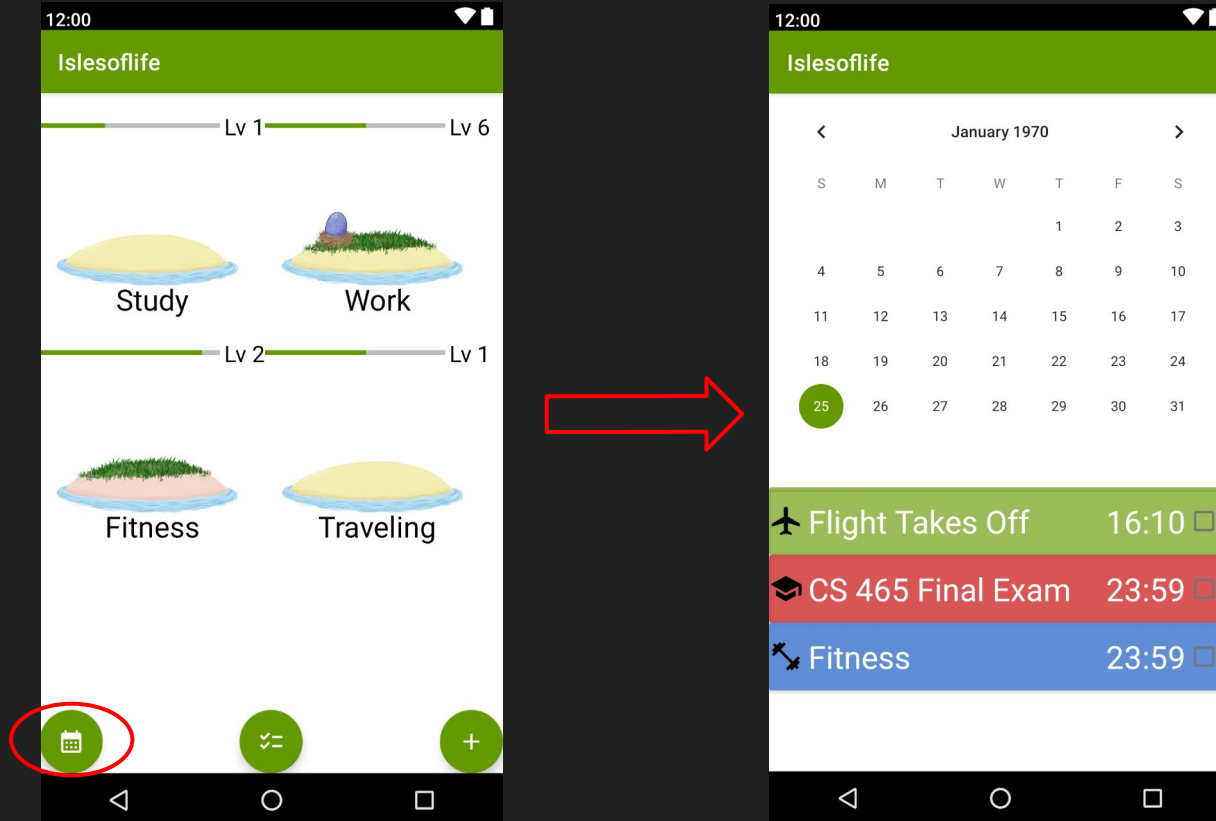

# Prototype

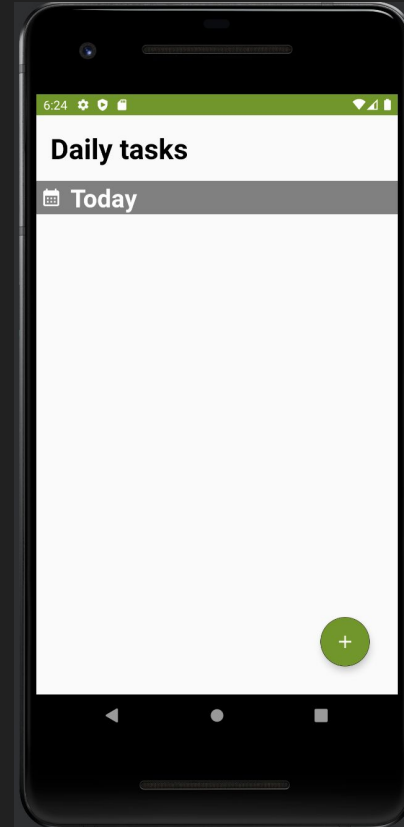

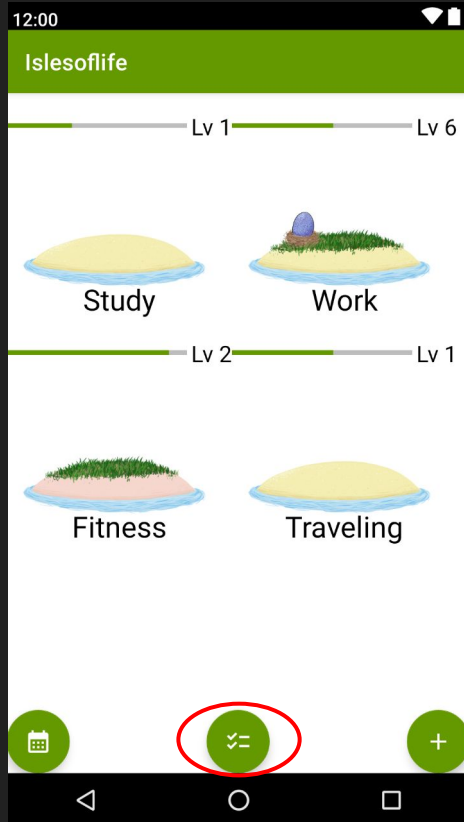

# Key Feature

- **Create an island:**
  - Helps user to categorize their goals.
  - Gives user the freedom to create their own category, customising the app according to their personal needs.
  - This later helps them measure their progress by comparing the progress across different categories.
- **Create a task:**
  - Lets user create and manage tasks per island.
  - Allows the user to designate the number of reward points to 'earn' after completing the task to differentiate between easy and complex tasks.
- **Check off a task and earn points:**
  - Helps users to manage their progress per island by keeping track of easy-to-understand quantitative parameter: reward points.
  - Points acts as a direct link of comparison between different islands.
  - Reward points also acts as a source of motivation.
